£49.99 4.4★

Hisense HS2000, 2.1 CH Soundbar, Visual built-in subwoofer, 240W max audio power...

£89.00 4.4★

Display Neither product has a display or screen in the usual sense, so this category really comes down to how clearly each soundbar communicates status and integrates with your TV setup. The Hisense HS2000 edges this section because it is designed around TV use, with TV Mode and EzPlay making day-to-day interaction simpler for most users. ULTIMEA's app control is useful, but it adds another layer of setup rather than simplifying the experience. Winner: Hisense HS2000.

Performance On paper, the Hisense HS2000 is the stronger performer. It offers 240W max audio power, which is a big jump over the ULTIMEA's 132W peak power, and that should translate into more headroom, fuller sound, and better ability to fill a medium-sized living room. The Hisense also includes Dolby Audio and DTS Virtual:X, both of which are valuable for making TV dialogue clearer and creating a wider, more immersive soundstage. ULTIMEA still has a built-in subwoofer and a 2.1-channel layout, so it should sound punchier than your TV speakers, but it simply cannot match the spec sheet of the Hisense. Winner: Hisense HS2000.

Build quality and design This is a closer call. The ULTIMEA M20 Pro is compact at 16 inches and is clearly pitched as an all-in-one solution for smaller rooms, desks, or PC setups. That makes it attractive if you want something discreet and easy to place. The Hisense HS2000 is likely the more conventional living-room soundbar, with a design aimed at TV owners who want a neat, integrated upgrade. Because Hisense is the more established TV/audio brand and the HS2000 is built specifically for television use, it gets the nod for overall confidence and finish. Winner: Hisense HS2000.

Battery life Neither product is battery powered, so there is no battery life to compare. Both are mains-powered soundbars designed to stay plugged in. This category is a tie by default.

Price and value for money This is where ULTIMEA makes its case. At £59.99, it is £14.01 cheaper than the Hisense HS2000, and both products carry the same 4.4/5 rating. If you are watching every pound, that lower entry price matters. However, value is not just about the sticker price; it is about what you get for the extra money. The Hisense gives you much higher claimed power output, Dolby Audio, DTS Virtual:X, TV Mode, and EzPlay, which are all meaningful upgrades for TV viewing. For most people, that extra £14.01 is well spent. Winner: Hisense HS2000 for value, ULTIMEA for cheapest buy.

Game library/features Soundbars do not have game libraries, so that specific category does not apply. If we interpret this as gaming and extra features, ULTIMEA has a small advantage in flexibility because it is marketed for TV and PC use, plus Bluetooth 5.4 and app control. That makes it potentially more convenient for a desk setup or casual gaming rig. Still, the Hisense HS2000 is better for pure AV features thanks to Dolby Audio, DTS Virtual:X, and TV Mode, which are more relevant to console and streaming use on a big screen. Winner: Tie, with a slight practical edge to ULTIMEA for PC convenience and to Hisense for TV/movie use.

Overall user experience For most buyers, the Hisense HS2000 is the more complete and reassuring package. It has the stronger audio specs, more premium TV-focused features, and by far the larger review base at 4,413 reviews versus ULTIMEA's 2,829, which suggests more proven real-world satisfaction. The ULTIMEA M20 Pro is still a good budget option, especially if you want to spend as little as possible and like the idea of app control and a compact 16-inch design. But when you add up sound quality potential, feature set, and brand confidence, the Hisense feels like the easier recommendation for a main TV. Overall summary: ULTIMEA is the cheaper alternative, but Hisense HS2000 is the better all-round buy for most people.

Final verdict If you want the best mix of sound quality, TV features, and long-term confidence, buy the Hisense HS2000. If your main priority is saving money and you want a smaller, more flexible soundbar for a bedroom, office, or PC setup, the ULTIMEA M20 Pro is still a solid bargain.

Winner: a

The Hisense HS2000 is the better overall buy because it offers much more power on paper, with 240W max audio versus the ULTIMEA's 132W peak, plus Dolby Audio and DTS Virtual:X for better TV sound. It also has TV Mode and EzPlay, which make it the more TV-friendly choice. Even though it costs £14.01 more, the extra features and stronger spec sheet justify the difference for most buyers.

Buy Product A If...

Buy the Hisense HS2000 if this is your main living-room TV sound upgrade and you want louder, fuller audio for films, sport, and streaming. It is also the better pick if you value Dolby Audio, DTS Virtual:X, and easier TV-focused setup features like TV Mode and EzPlay.

Buy Product B If...

Buy the ULTIMEA M20 Pro if you want the cheapest option and are happy with a more compact, budget-first soundbar. It makes sense for a bedroom, small flat, or PC/gaming desk setup where app control and Bluetooth 5.4 matter more than maximum power.
